Harvest Disocunt Schedule (Corn)

Shrink:

Wet corn delivered at harvest will be dried and is subject to a shrink factor of 1.4% per bushel, per point of moisture over 15.0%.

Example:	Load: 56,000 Lbs.	Moisture: 17.5%	
Wet Bushels	= 1,000 Bushels	This is figured by taking 56,000 pounds and dividing it by the Test Weight Standard of 56 pounds per bushel	
Shrink Value	= 2.5pts.*1.4% = 3.5%	Calculated by taking the points of moisture to be removed and multiplying by the shrink factor of 1.4%	
Net Bushels	= 965 Dried Bushels	This bushel amount will be available to Price or Apply to a Contract
